

# WebSphere in a hybrid cloud environment

With Demonstrations

“The Art of the Possible”

Kevin Postreich  
IBM World Wide Technical Sales

# Learning Objectives

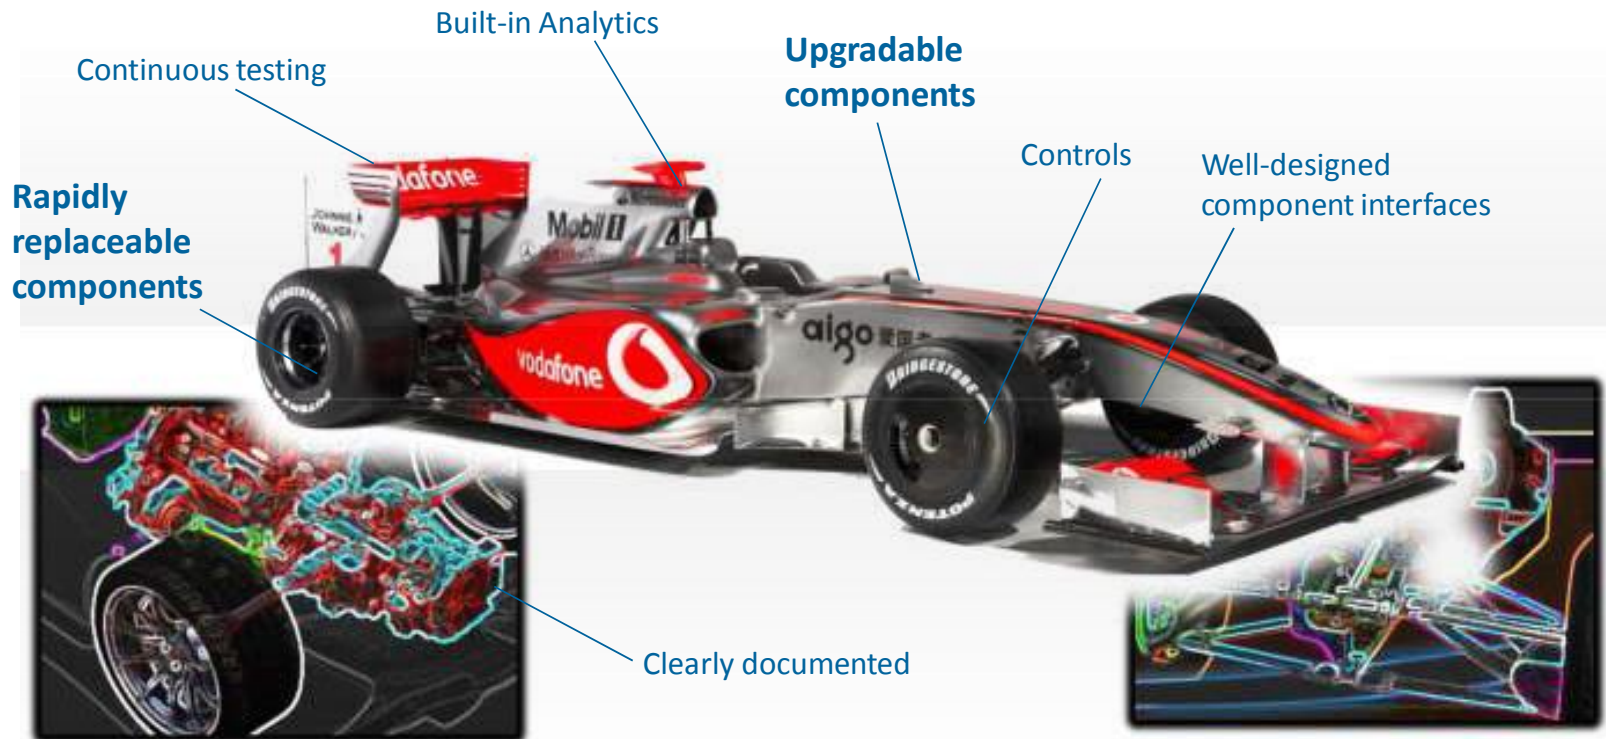

At the conclusion of this session, the participant will be able to...

- ❑ Have basic understanding of WebSphere Middleware in a Hybrid Cloud
- ❑ Understand why Bluemix is important in the IBM hybrid cloud world
- ❑ Realize the ‘Art of the possible’ of how to leverage WebSphere middleware services in Bluemix to quickly develop engaging applications
  1. **Build and deploy** applications to Bluemix
  2. **Caching** service integration
  3. **Messaging** service integration
  4. **API management** integration to on-premis systems of record services
  5. **Twitter** for **Social Media** service integration
  6. **WebSphere Real-Time Communications (WebRTC)** service integration
  7. **Internet of Things (IoT)** service integration

# Importance of Rapid Innovation

- Each Formula One car is considered a prototype solution (it is never "finished")
- ⇒ Design objective is to enable rapid and continuous evolution
  - ⇒ Comprised of **composable units** that can quickly evolve and be rapidly replaced to stay ahead of the competition.
  - ⇒ Components are ready for immediate use!

# Rapid Innovation: Becoming a Composable Business

- Dynamic, flexible, responsive, agile
- Built on blocks of capability that can be rapidly changed
  - Quickly prototype, evolve, change, throw away, if needed, **while achieving the goals outlined below:**
  - **Use of managed infrastructure, IBM and 3<sup>rd</sup> party ready to use services, IoT, APIs , ect to develop something unimaginable!**

## Business

- Faster time to market
- More responsive to changing business needs

## IT Operations

- Failure ready infrastructure
- Reduced risk during changes

## Developers

- Can focus on innovation
- More freedom and choice

# There is no faster way to get there!

- There is no faster way to get there than WebSphere middleware on IBM Cloud (Bluemix)
- No messy infrastructure concerns
- No installation / configuration of middleware
- No downloads
- Just write code!

# Built for Developers

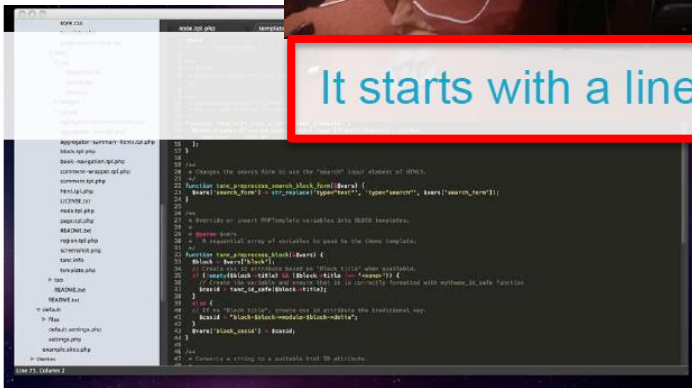

# About today's development landscape

## *It starts with a line of code!*

*It starts with a line of code.*

- Move quickly, see results fast.
- Needs to learn new skills through playing and experimenting safely.
- Needs freedom to experiment without worrying about pricing right away.
- Needs to be able to prototype quickly, and throw away if necessary
- Needs to be able to use multiple language and runtimes in a single project, not only Java, but JavaScript, Ruby, etc
- IBM Bluemix is an ideal platform to meet these customer needs
  - No middleware to install and configure
  - No upfront costs to get started
  - Quick time to explore, prototype and validate fresh ideas
  - Multi-language and runtime built-in

# What is Bluemix? Delivering PaaS Composable Services

Bluemix is an **open-standard**, cloud-based platform (PaaS) for building, managing, and **running applications of all types** (web, mobile, big data, new smart devices, and so on).

**Quickly build and deploy innovative applications using a rich set of composable services from IBM and the growing ecosystem of 3<sup>rd</sup> party services**

---

## Instant Environments

The developer can choose any language runtime or bring your own. Zero to production in one command.

---

## APIs and Services

A catalog of IBM, third party, and open source API services allow the developer to stitch an application together in minutes.

---

## On-Premises Integration

Build hybrid environments. Connect to on-premises assets plus other public and private clouds.

---

## DevOps

Development, monitoring, deployment, and logging tools allow the developer to run the entire application.

---

## Layered Security

IBM secures the platform and infrastructure and provides you with the tools to secure your apps.

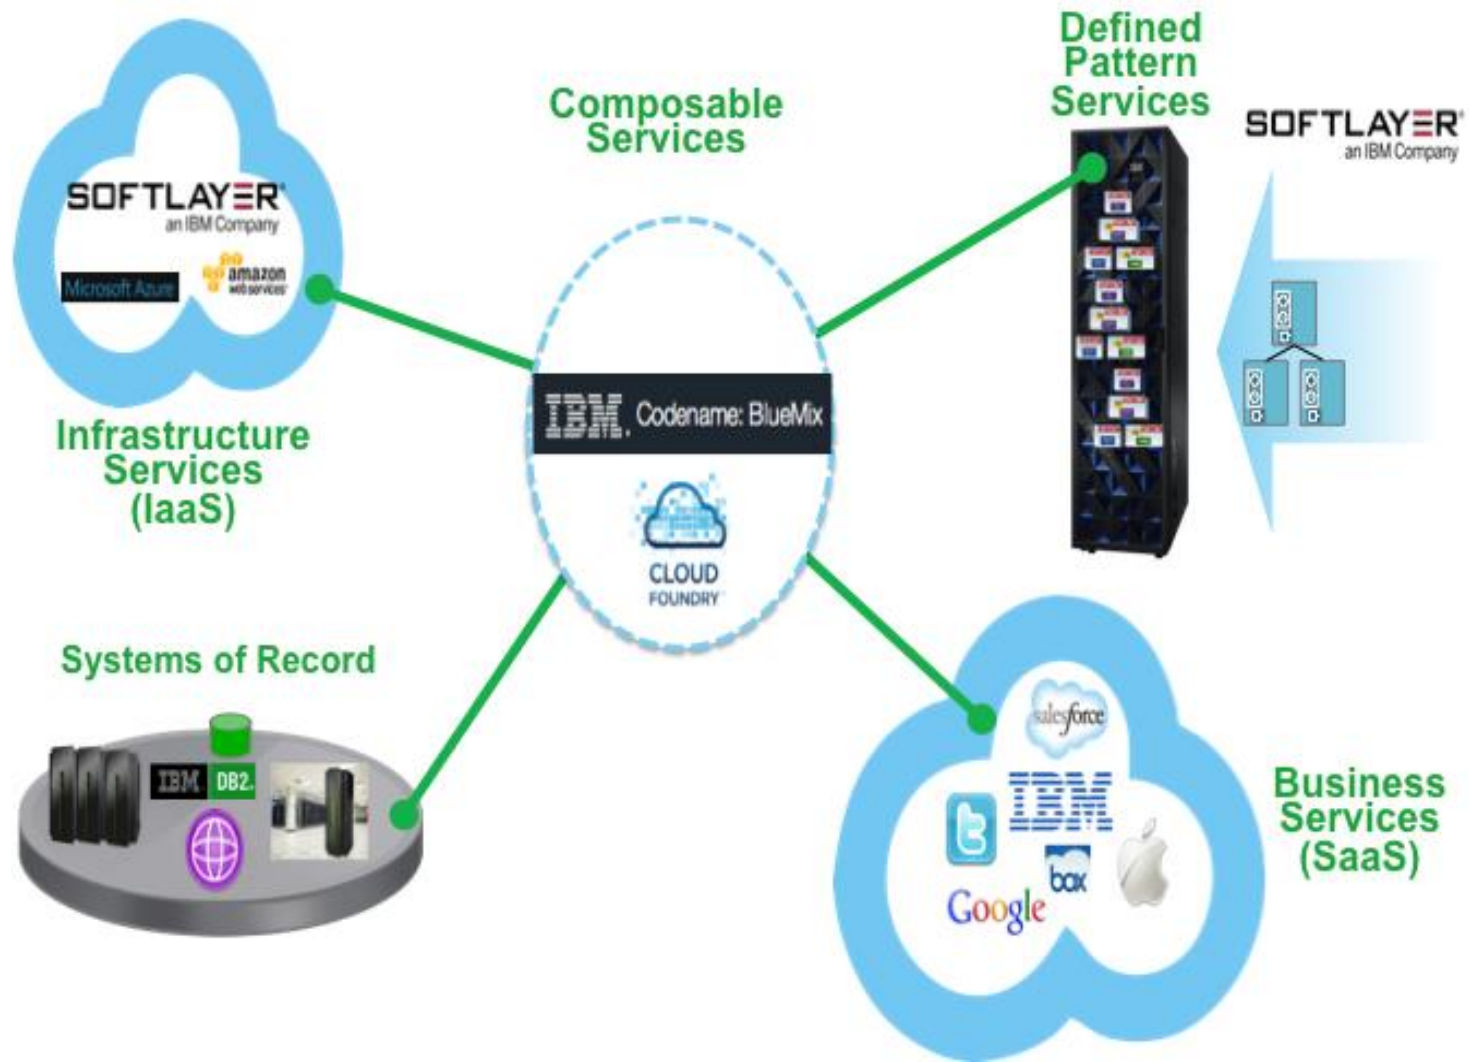

---

## Flexible Pricing

Sign up in minutes. Pay as you go and subscription models offer choice and flexibility. **Only pay for what you use!**

# Integration among existing applications and born-on-the-web applications in Bluemix

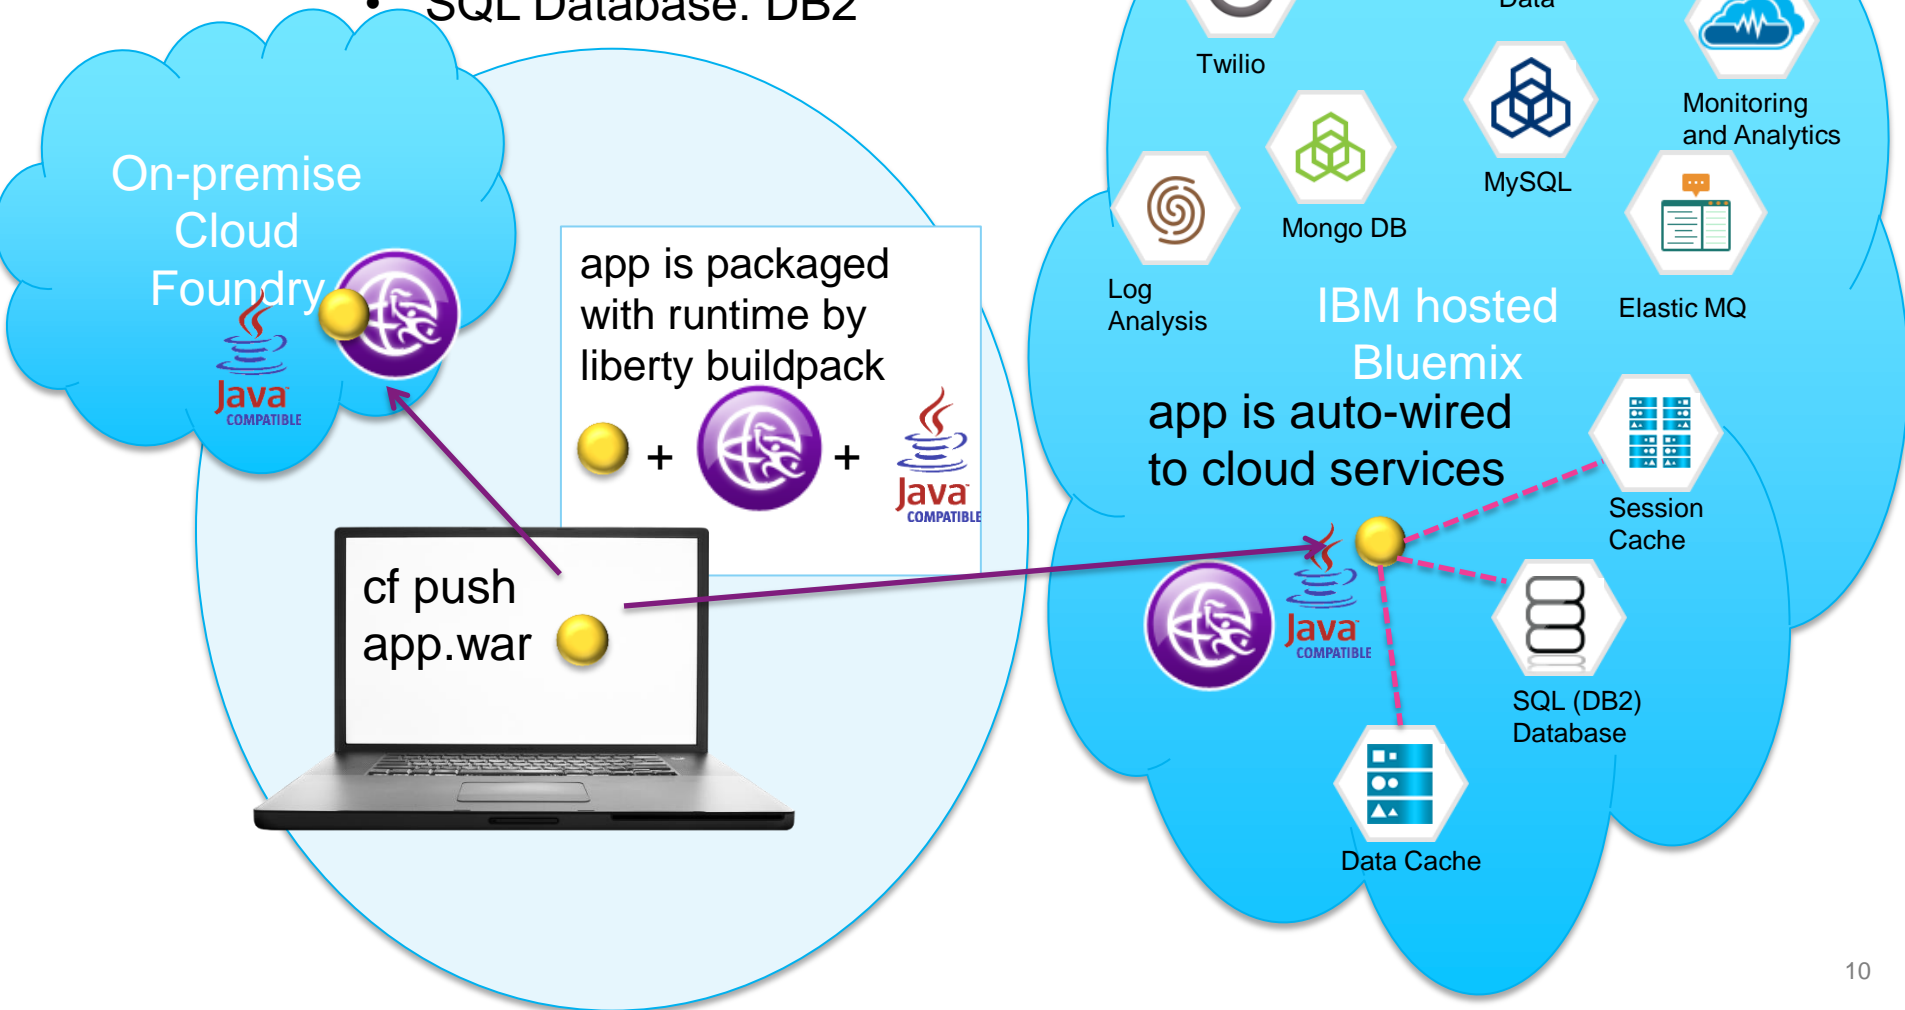

- Use cloud integration to securely expose data and applications outside of Bluemix
- Provide integration services to systems of record running on WebSphere Application Server

# WebSphere Liberty Profile *is* the Java runtime for Bluemix

- Java: Liberty Profile
- Cache: WebSphere eXtreme Scale
- Messaging: MQ Light
- SQL Database: DB2

# Deployment flexibility provides the optimal platform for apps

## WebSphere Everywhere! Write once, deploy everywhere.

### On-Premises

*Total Control  
Maximum Flexibility  
Maximum Security*

Build Your Own Cloud  
Use virtualized WebSphere  
App Server on your hardware

Pure Application Systems  
Use either existing patterns or  
build your own patterns for the  
WebSphere App Server

### IaaS

*Public Cloud  
Economies  
Time to Market*

IaaS - SoftLayer  
BYOS&L - WebSphere App Server

IaaS - Amazon  
BYOS&L - WebSphere App Server

IaaS - Microsoft Azure  
BYOS&L - WebSphere App Server  
Pay-as-you-Go WAS VMs

### PaaS

*Shared Everything  
Economies  
Packaged Services*

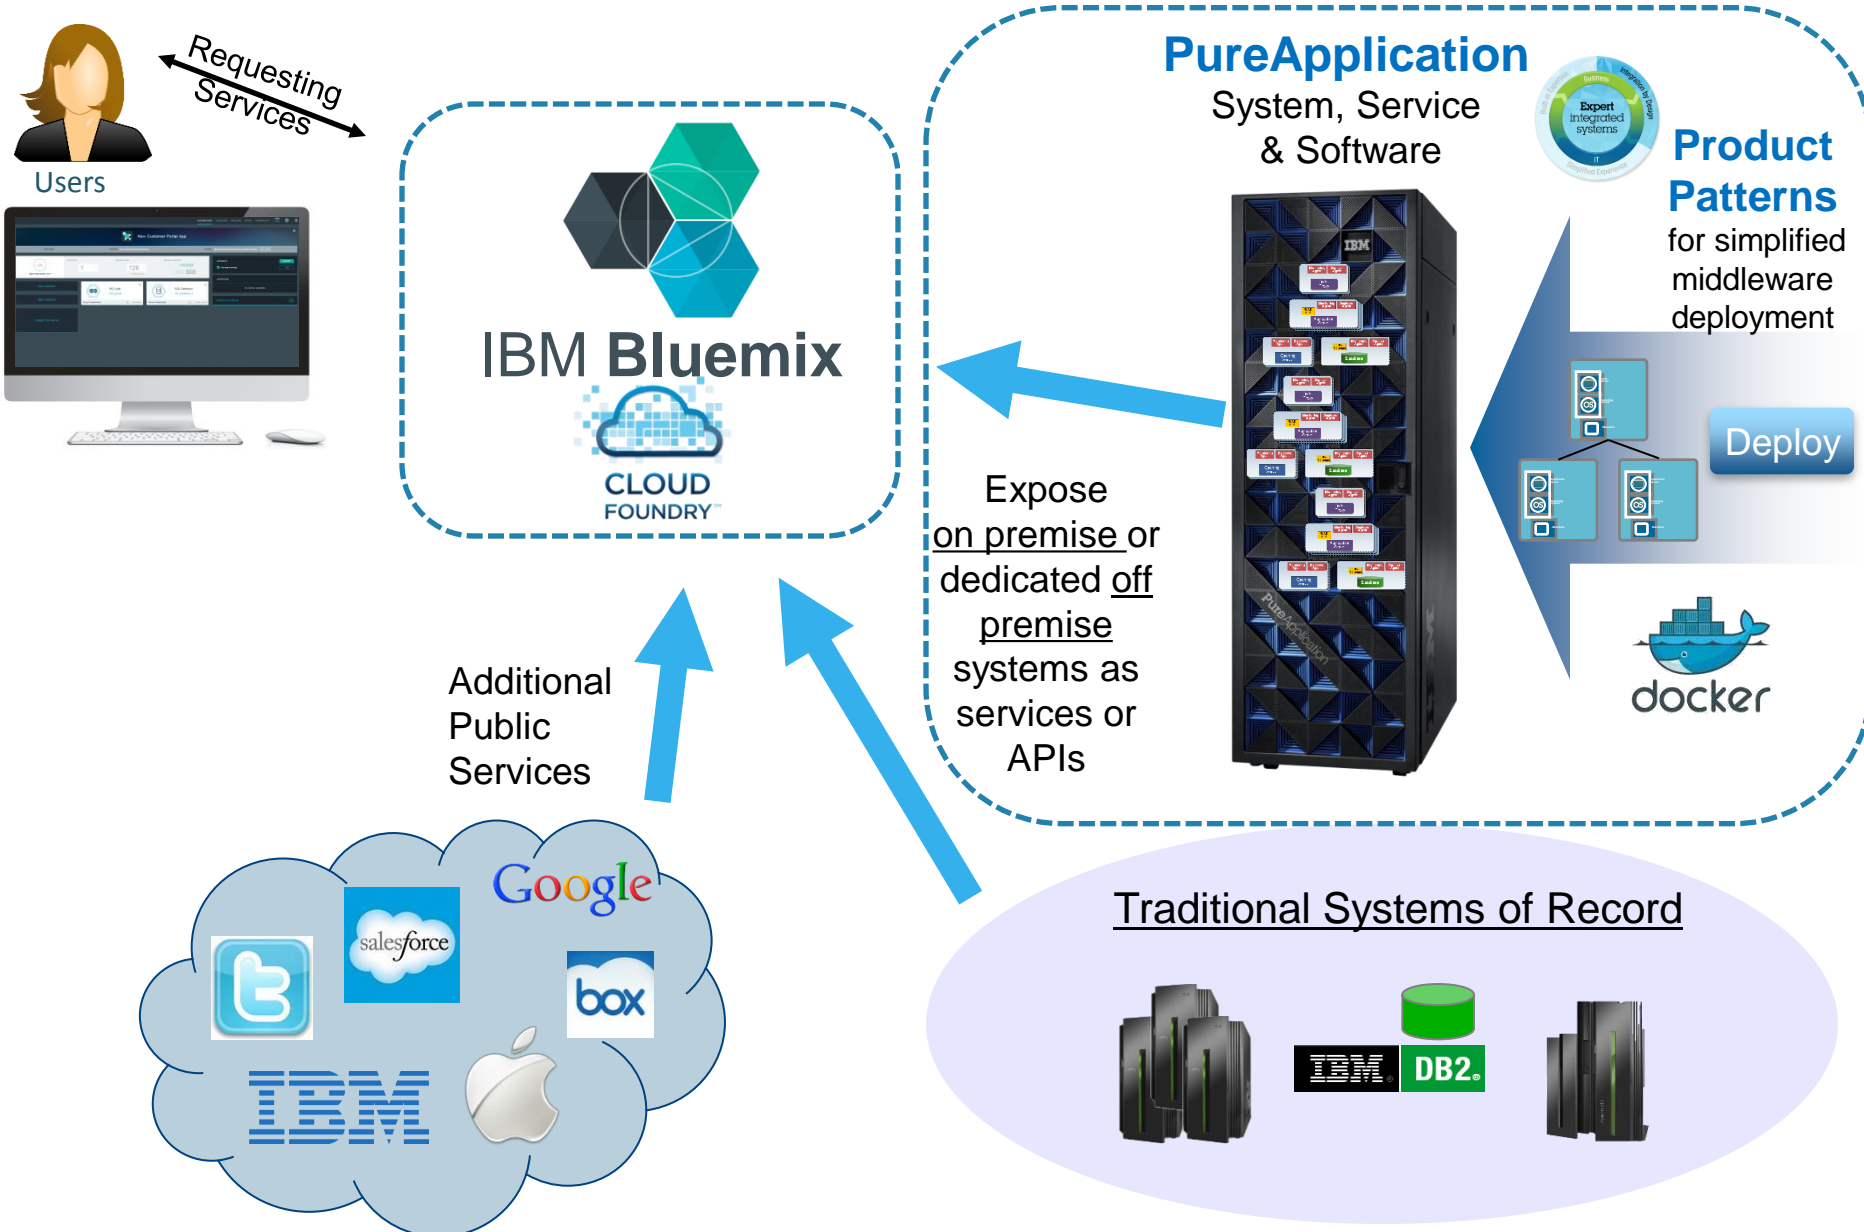

PaaS - Blue Mix  
Composable services  
Liberty Buildback

PaaS - Cloud Foundry  
Liberty Buildpack

# Moving Towards a Seamless & Borderless Managed IBM Cloud

# Cloud-Trader Unleashed: Making it engaging

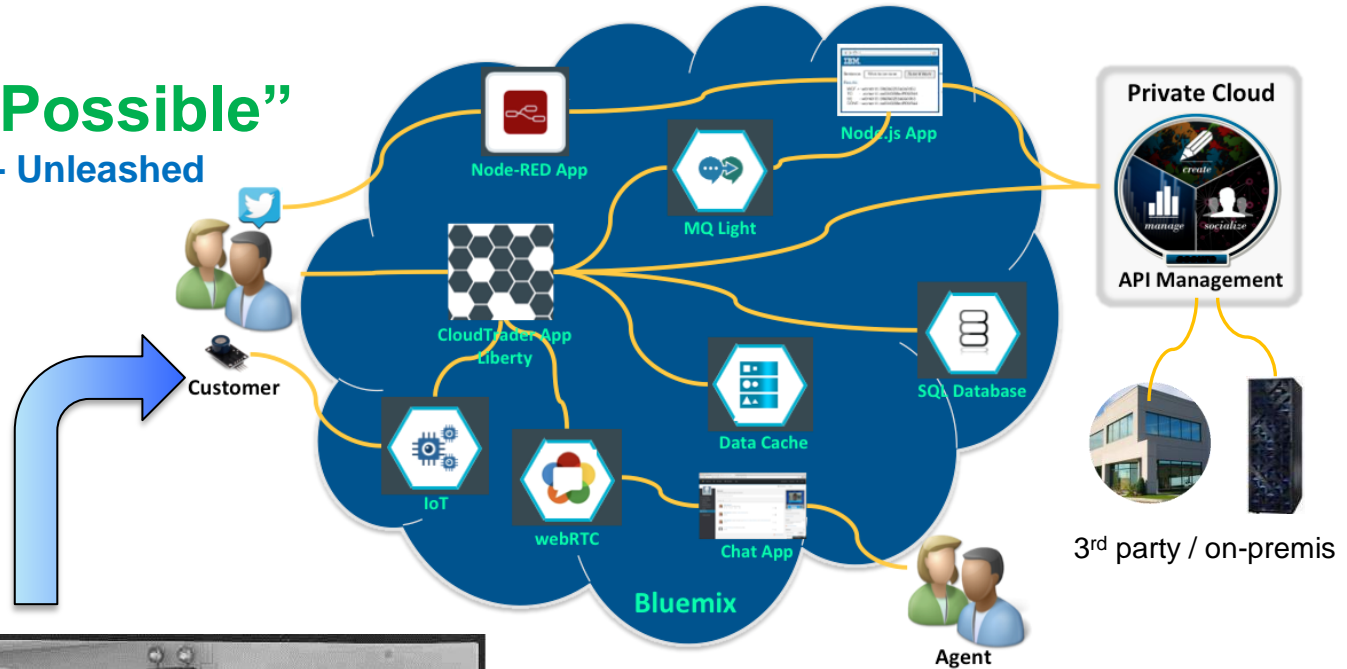

*Embellish Java EE application showcasing key WebSphere portfolio integration capabilities in the cloud*

## “Art of the Possible”

### Cloud Trader - Unleashed

#### DayTrader

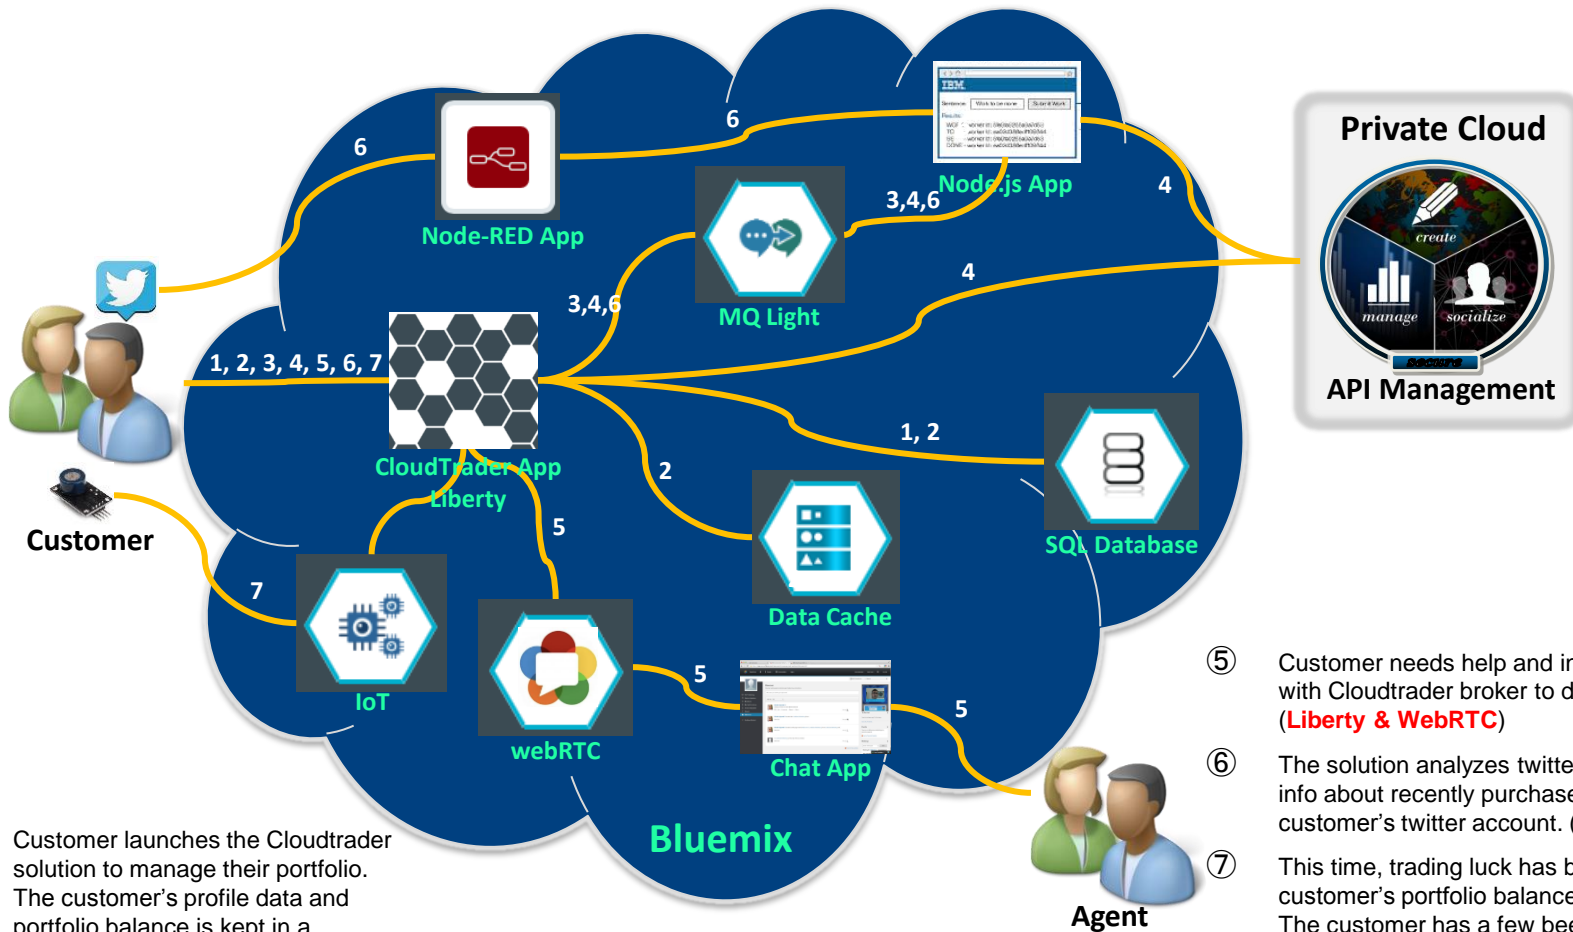

- Java EE 6
- Database for persistence
- System of Record
- Nothing “Cloud” about it

- As a developer, you now have a hand in creating the future
- Whatever your task, we’ve got you covered:
  - With all of the instant services, runtimes, and infrastructure you need to **unleash** your ideas into the present

# Cloud Trader – Unleashed Scenario overview

- ① Customer launches the Cloudtrader solution to manage their portfolio. The customer's profile data and portfolio balance is kept in a database (**Liberty & SQL Database**)
- ② Customer data is cached to improve solution's performance (**Data Cache**) and customer initiates trades

- ③ Because of customer's trading volume, a "Incentives and Offers" service sends the customer a voucher for discounted / trades (**Node.js & MQ Light**).
- ④ Bad luck with trades results in a low portfolio balance. Incentives and Offers app then invokes external 3rd party API and responds to customer with bank offers for a line of credit (**APIM**). Customer should be able to view the offers in the notifications on home page

- ⑤ Customer needs help and initiates video chat with Cloudtrader broker to discuss his portfolio (**Liberty & WebRTC**)
- ⑥ The solution analyzes twitter feed for trending info about recently purchased stocks and alerts customer's twitter account. (**Node-Red**)
- ⑦ This time, trading luck has been very good and customer's portfolio balance increases nicely. The customer has a few beers to celebrate! After a few drinks, customer attempts another trade, but the Cloudtrader rejects this trade based on the blood alcohol level detected by the solution's sobriety assurance ( $> .08$ ) (**IOT**)

# Demonstration

1. **Build and deploy** Java JEE application to Bluemix
2. **Messaging** service integration
3. **Twitter** for **Social Media** service integration
4. **WebSphere Real-Time Communications (WebRTC)** service integration
5. **Internet of Things (IoT)** service integration
