Innovate, Reduce Cost & Accelerate Time to Market for

*Traditional WAS Workloads*

Deliver the right app

to the right user

at the right time

for the right experience

IBM

# IBM Bluemix Offering Options

## Public

- 100+ services
- Fine grained, usage based pricing
- Greatest economies of scale
- Unlimited, dynamic, and elastic scale
- 4 Main Datacenters

## Dedicated

- Single-tenant hardware in IBM data center
- Multiple options for secure enterprise connectivity
- All pricing based on allocated capacity
- Additional capacity can be added in hours
- 25+ Softlayer Datacenters

## Local

- Customer purchased and maintained IaaS
- One time installation fee
- Collaborative operations with access to Bluemix public services
- Ongoing pricing based on allocated capacity
- Scalability limited to size of underlying IaaS

# IBM Bluemix Services leveraging WebSphere Application Server 101

“I want to bring use existing skills, tools & scripts with little configuration changes.”

WAS for Bluemix provides virtual machine instances to create and manage enterprise WAS deployments in a consistent / repeatable manner with significant flexibility to tune your env.

“I want application portability & ability build services and plug them into the Cloud.”

IBM Liberty Container allows you to deploy container images where you can package your Liberty apps and services with resource isolation and allocation that is more portable and efficient

“I am aggregating multiple services to create a new application real quick.”

Highly composable, fast-to-start, dynamic application server runtime environment for running Java EE 7 and OSGi application

# WAS For Bluemix - Public

How do you get there?

Customers get to choose the level of infrastructure abstraction and fine-tuned control that suits their apps and services!

**“I want to bring use existing skills, tools & scripts with little configuration changes.”**

**WAS for Bluemix** provides virtual machine instances to create and manage enterprise WAS deployments in a consistent / repeatable manner with significant flexibility to tune your env.

**IBM WebSphere Application Server for Bluemix** reduces deployment time, increases consistency, and fosters agility. These benefits you likely expect when exploring cloud-based approaches for your WAS environments.

**Optimize**

## WebSphere Application Server

Same WAS you Know and Love; Same features & capability but gaining the Cloud

### Innovative App Server

Flexible runtime environment for a lightweight, dynamic application runtime or an advanced, large-scale application platform.

### Rapidly deliver Rich Experiences

Comprehensive set of open standards programming models to better align project needs with capabilities and developer skills.

## Bluemix

Your Route to get your applications to the Cloud. Build, run, deploy and manage applications on the cloud with ease.

### Extend apps with services

A catalog of IBM, third party, and open source services to grow your solution.

### Flexible Pricing

Try some services for free and when you're ready, pay only for what you use. Pay as you go and subscription models offer choice and flexibility.

## IBM WebSphere Application Server for Bluemix

Takes WAS to the Next Level with comprehensive cloud orchestration to help you Extend and Evolve.

### Lift & Shift WAS to Cloud

Rapidly bring your Apps to Cloud & Drive faster solution delivery ahead of the competition

### Best of Both Worlds

Balance Cloud Economics & Agility with WAS quality, security and governance.

# WebSphere Application Server in Bluemix

- WebSphere Application Server on Cloud
  - A service (in the Application Services category)
    - Not a Cloud Foundry runtime
  - Three plans
    - WAS Liberty Core
    - WAS Base
    - WAS ND
  - Runs in a Red Hat Enterprise Linux (RHEL) VM
  - Actually a WAS server in PureApplication Service
  - Requires a VPN to log into the VM and/or access the Admin Console
  - Public IP address can be added for public access to your applications

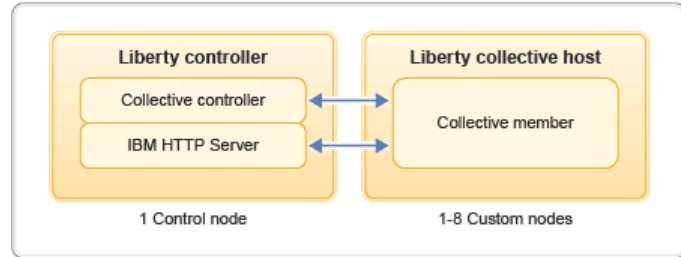

WebSphere Application Server

Network deployment cell

Liberty collective

# IBM WAS for Bluemix provides the Building Blocks for building WAS topologies on Bluemix

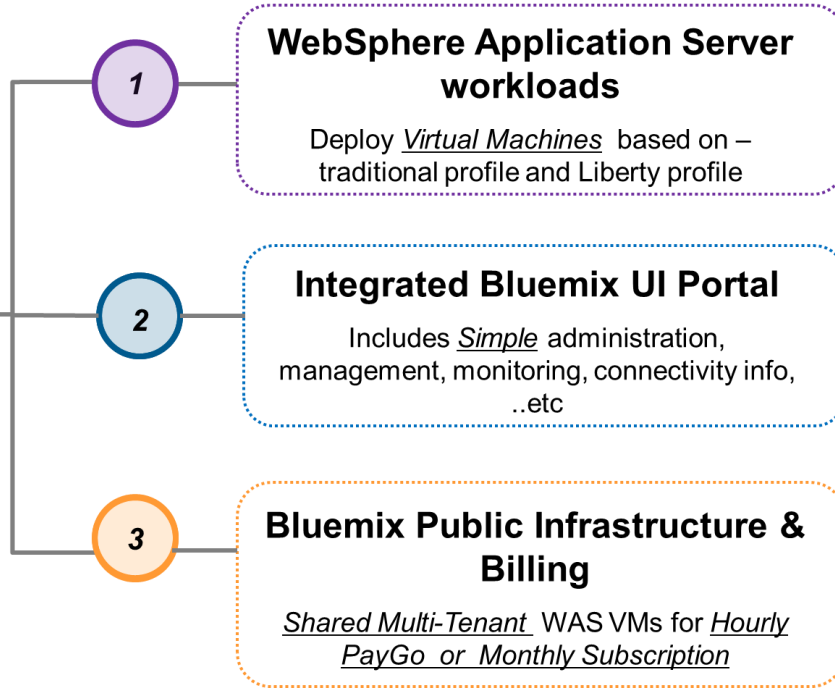

Optimize

Develop, Test and Run

IBM Application Server on Cloud

Standardized virtual machines, pre-configured through automation with self-serviced consumption based pricing.

### Easy adoption

- **10 Instance Hours Included each Month** - Designed to allow testing of an application on the platform
- **Free tier for many Bluemix service** - encourages experimentation of new services for applications already running on Bluemix

### Multiple Commitment Models

- **Pay-as-you-go** - optimized for flexibility, no term commitment
- **Subscription** - term based optimized for cost, discounted from pay as you go rates

### Self Service

- Zero to coding in **less than 5 minutes**
- **Credit card** over the web in many countries - or through your IBM rep

#### IBM manages:

- 24/7 Support
- Platform Configuration
- Platform Uptime
- Platform Monitoring
- Platform High Availability
- WAS Product Updates
- Platform Scheduled Maintenance with advanced notice

#### Customer manages:

##### WAS Maintenance

Version updates on customer's schedule

##### Capacity and scaling

By default, we provide capacity in customer's regional data center. Additional capacity available by adding my Instances!

# What you need to do to deploy WASaaS and connect to on-premise resources

- Environment setup and application deployment to WASaaS on Bluemix
  - ✓ Create the WebSphere Application Server on Bluemix Service
  - ✓ Establish a secure VPN connection between the local VM and Bluemix (To access VM and WAS Admin Console)
  - ✓ Create Secure Gateway and Destinations from WASaaS to on-premise resources
  - ✓ Upload the application binaries, Database drivers, properties files, automation scripts, etc, to WAS VM on Bluemix
  - ✓ Using wsadmin scripts or admin console, configure your WASaaS on Bluemix environment
  - ✓ Deploy the application to WAS v9 on Bluemix
  - ✓ Test the secure connections between WASaaS on Bluemix to the local on-premise database
  - ✓ Test the application deployed to the WASaaS on Bluemix environment

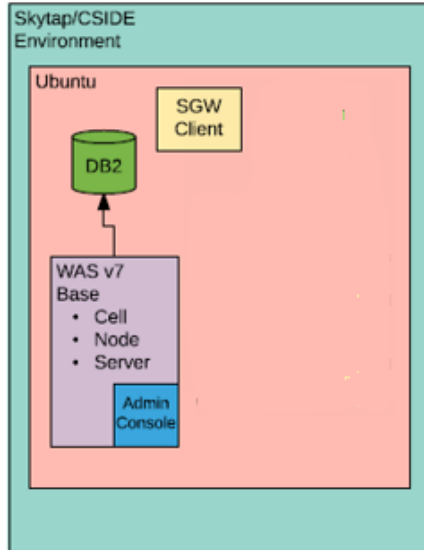

**Want to learn how to AUTOMATE all of this, and MORE?**

- **Come to my session at 15:30 today in room: “[Fry](#)”**

**Demonstration:** UrbanCode Deploy speeds up migration and deployment of On-Premise WebSphere applications to WebSphere on IBM Bluemix

# Runtime Environment – Initial State

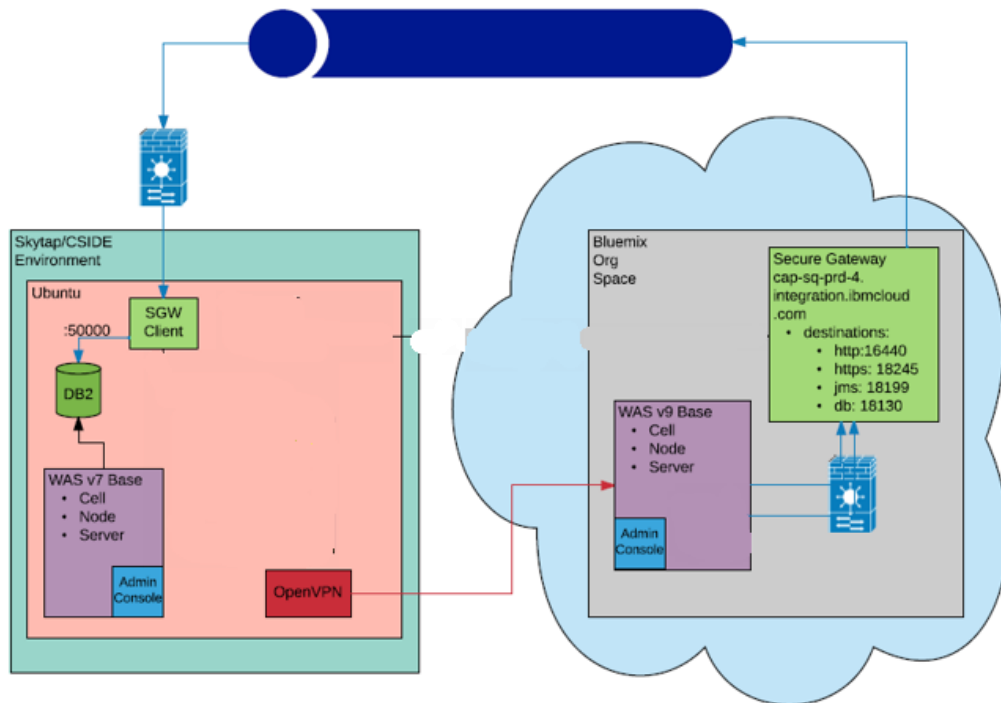

---

# Runtime Environment – Target State

## Activities

- Provision WAS on Bluemix
- Provision Secure gateway Service
- Setup SG destinations for DB2
- Setup and start openVPN
- Setup and start SG Client
- Deploy WAS application and configuration to v9 on Bluemix using existing wsadmin scripts or WAS Configuration migration scripts.

Want to learn how to **AUTOMATE** all of this, and **MORE**?

Come to my session at 15:30 today in room: [“Fry”](#)

**Demonstration:** UrbanCode Deploy speeds up migration and deployment of On-Premise WebSphere applications to WebSphere on IBM Bluemix

# Quick Demo – How to get Started

**Quickly** get up and running on **pre-configured** WAS Traditional and WAS Liberty Virtual Machines in a hosted cloud environment on Bluemix with **full control** of the underlying OS & middleware.

TYPE  
Service

[VIEW DOCS](#)

This service gives you the WebSphere Application Server experience in Bluemix. Choose from Liberty, Classic, or ND installations of WebSphere Application Server, preconfigured and hosted on your own Red Hat Enterprise Linux guest.

- **WebSphere Experience**

Reuse your WebSphere administration skills and scripts to ease your transition to cloud.

- **Shell and Admin UI Management**

Use a secure shell, or log into the Admin Center/Console to control your WebSphere environment.

- **Use. Abuse. Repeat.**

It's a cloud service after all. Use it for an hour. Drive it hard. Delete it. Grab a new one when you need it; it's up to you.

- **Full-Feature Application Servers**

Leverage sophisticated enterprise features like transactions, just like you do on-premise.

- **Customize just what you need**

We've already installed and configured WebSphere, now all you have to do is make those minor changes to get your application just the way you need it.

Secure Gateway	cap-sg-prd-1.integration.ibm.cloud.com:12345

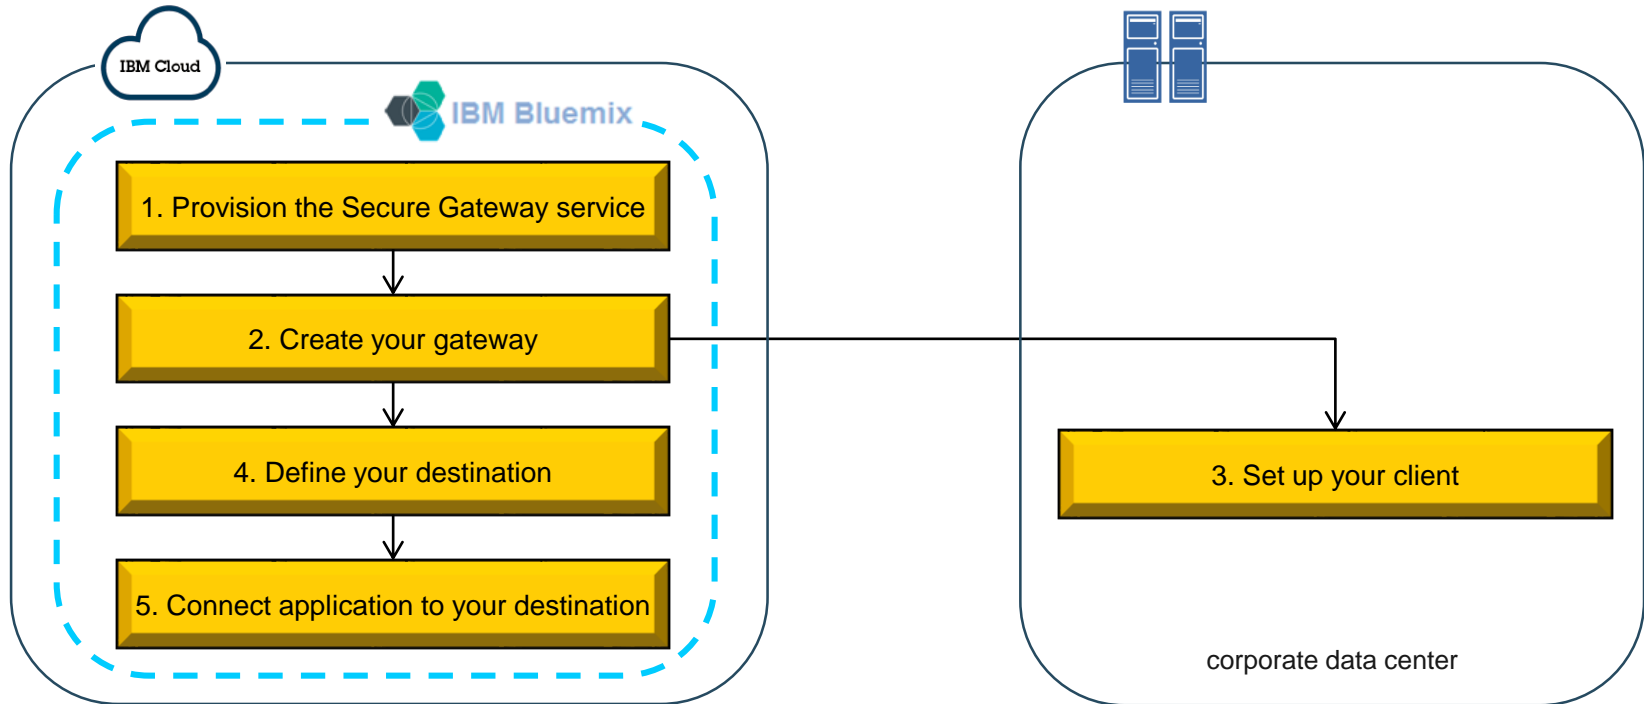

Secure Gateway

# Secure Gateway: Implementation steps

- Secure Gateway has components in Bluemix and in the target data center

# Quick Demo – Secure Gateway, connecting WASaaS to on-premise resources

# WAS Single Tenant for Bluemix

Global Footprint: More data centers. In more locations. Around the world.

Maximum Privacy: Hardware Isolated to a single customer for regulatory compliancy or workloads with intensive computing requirements can make full use of the system

Fast & Secure Networking Option: Move data to and from your on-premises data center across 1Gbps or 10Gbps network connections and control every hop of its network path.

**“I want to bring use existing skills, tools & scripts with little configuration changes.”**

**WAS for Bluemix** provides virtual machine instances to create and manage enterprise WAS deployments in a consistent / repeatable manner with significant flexibility to tune your env.

# WAS for Bluemix – Single-Tenant Option Target Use Cases

## Isolate WebSphere Workload

All of the supporting infrastructure running WAS serves a single customer. With single tenancy, **each customer has their own independent hardware and instances of WAS**. With this option, there's essentially no sharing going on. Everyone has their own, separate from everyone else.

## Fully Integrated Hybrid Environment

Blur the lines between on-prem and off-prem resources. With a **high speed, direct network link between our Bluemix data centers and customers datacenters**, you can move data between servers (literally) at the speed of light.

## Super-Secure Data

Customers moving sensitive financial, health, or government-regulated data to and from WAS for Bluemix can **further ensure its security by completely avoiding exposure to the public Internet**.

# WAS in Public Bluemix – Single Tenant Option

## WebSphere Application Server for Bluemix – Single Tenant

1

### WebSphere Application Server workloads

Deploy Virtual Machines based on – WAS ND, Base, & Liberty Core

2

### Integrated Bluemix UI Portal

Includes Simple administration, management, monitoring, connectivity info, ..etc

3

### Single-Tenant Infrastructure

Deploy WAS for Bluemix VM on Private Bare metal hardware in which the Physical Cores, Memory, and Storage is isolated to one customer.

4

### Additional Cloud Services

Intelligent workload placement, VPN, Firewall, DirectLink High Speed Connection up to 10Gps, & Softlayer VLAN Spanning to expand to additional customer solutions

This service gives you the WebSphere Application Server experience in Bluemix. Choose from Liberty, Classic, or ND installations of WebSphere Application Server, preconfigured and hosted on your own Red Hat Enterprise Linux guest.

- WebSphere Experience**  
Reuse your WebSphere administration skills and scripts to ease your transition to cloud.
- Shell and Admin UI Management**  
Use a secure shell, or log into the Admin Center Console to control your WebSphere environment.
- Use, Abuse, Repeat.**  
It's a cloud service after all. Use it for an hour. Drive it hard. Delete it. Create a new one when you need it. It's up to you.
- Full-Feature Application Servers**  
Leverage sophisticated enterprise features like transactions, just like you do on-premise.
- Customize just what you need**  
We've already installed and configured WebSphere, now all you have to do is make those minor changes to get your application just the way you need it.

# WAS for Bluemix – Single Tenant Architecture

WAS for Bluemix – Single Tenant is isolated capacity to provision WAS on physical servers only accessed by that one client.

WAS for BM - Multitenant

# WAS for Bluemix Single Tenant Pricing

Product Name	IBM List Price	*Price per GB-Hr
IBM WebSphere Application Server for Bluemix – Single Tenant Small (64 vCores,128GB RAM) Instance per Month	\$25,600	\$0.27
IBM WebSphere Application Server for Bluemix – Single Tenant Medium (128 vCores,256GB RAM) Instance per Month	\$43,800	\$0.23
IBM WebSphere Application Server for Bluemix – Single Tenant Large (256 vCores,512GB RAM) Instance per Month	\$80,500	\$0.22

## Other Required / Prerequisite Parts:

- Bluemix Public Subscription (Min \$500)
- Bluemix Public Support (Min \$200)

\* Theoretical Calculated Price based on 730 Hrs per Month

# WAS in Public Bluemix Entry Points

## What:

- Shift existing Java apps to Cloud as-is
- Leverage Cloud services-monitor & analytics
- Adopt Cloud economics (i.e. PAYGo)
- Utilize technologies that ease portability across environments (i.e. Docker, VMs)

## Client Value:

- TCO reduction via offloading operational expenses for infrastructure and middleware tier
- Risk reduction via skills and admin artifact reuse
- Prepare for client datacenter capacity limitations with elastic growth in the cloud
- Optimize CAPEX vs. OPEX budgets through hourly, monthly and BYOL pricing options

## Multi Tenant:

- Cost Effective (Shared Server – Multiple/Secure VMs)
- Bluemix Mgmt Console
- Bluemix Services

## Single Tenant:

- Dedicated Server – Meets Demanding Security Requirements
- Very High Performance
- High Speed (up to 10 GB) direct link to data center
- Bluemix Mgmt Console
- Bluemix Services

# Use Cases for WebSphere for Bluemix

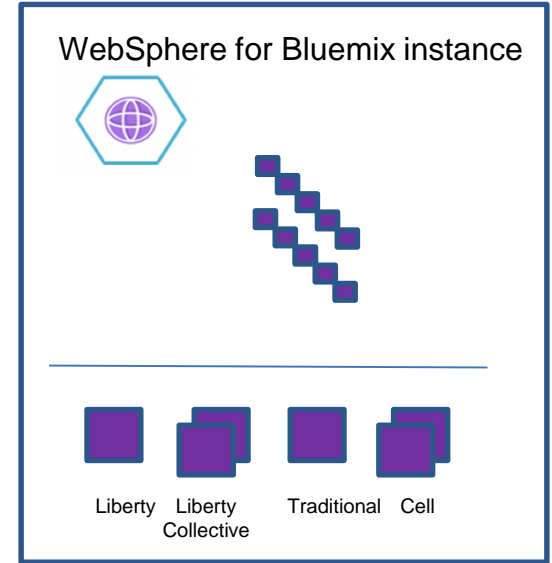

---

- Dev/test of existing workloads
- Upgrade existing back level WebSphere applications to supported runtimes
- Production workloads which can be augmented with Cloud Services
- Augment with Cloud Native

# WebSphere for Bluemix for Development / test

- WebSphere for Bluemix is designed for the rapid create, use, and destroy loop of an agile development process.
  - Tools infrastructure is the same as they use today on-premises
    - Traditional WebSphere scripts to configure the environment and deploy the applications
    - Can use rest or scripts to integrate applications into Devops chains
  - The Service keeps pools of preconfigured VMs, to speed the deployments to enable automated regression testing

Bluemix IaaS (softlayer)

# WebSphere for Bluemix for Upgrading of WAS

- Easier to keep current with WebSphere release levels
- Recommend Single Tenant for production workloads where the workload is mission critical
- Today, migration is manual, through out 2017 out intention is to automate the migration

## WAS for Bluemix

- ✓ **UCD Automation Enhancement:** Automates the migration to a new versions of WAS, getting your innovations to the cloud faster.
- ✓ **App-to-Cloud Migration Tool:** Move WAS apps outside the firewall & into Bluemix ensuring topology, security, governance, capacity, tooling, and dependencies are identified & resolved using IBM Best Practices.

# WebSphere for Bluemix for Production

- Traditional WebSphere or Liberty running on a cost effective model.
- Can begin to take advantage of cloud services in their existing application without rewriting the applications
- Applications can be wrapped as services and APIs externally made available.
- Recommend Single Tenant or Dedicated for production workloads where the workload is mission critical and dependent on desire to exploit services.

# WAS For Bluemix – Dedicated

Global Footprint: More data centers. In more locations. Around the world.

Maximum Privacy for Entire Cloud: Add WAS VMs on Bluemix Dedicated Hardware Isolated to a single customer for regulatory compliancy or workloads with intensive computing requirements can make full use of entire cloud infrastructure.

Fast & Secure Networking Option: Move data to and from your on-premises data center across 1Gbps or 10Gbps network connections and control every hop of its network path.

# Hertz rides high with IBM, accelerates DevOps transformation with Bluemix Garage, WAS for Bluemix, and GitHub Enterprise

## ? Need

With operations in more than 150 countries through multiple lines of business, the Hertz Corporation is one of the world's largest car rental brands.

Seeking to prepare itself for the next phase of growth, Hertz Corp decided to embark on a DevOps journey by moving its core applications to the cloud and consolidating its own data center footprint. Hertz wanted to modernize its existing on-premises WebSphere Application Server (WAS 6.1) infrastructure that runs the current Hertz.com application and migrate to WebSphere Application Server on Cloud with Bluemix Dedicated platform. The company sought a solution whereby it can migrate its monolithic web application to a hybrid cloud solution and then rewrite the application based on micro-services architecture for greater flexibility.

## ⚙️ Strategy

In early 2015, following a corporate directive, Hertz began discussions with IBM on moving its WAS-based e-commerce solution to the Bluemix cloud platform. Soon after an initial win in February 2016, the IBM implementation hit a roadblock with Hertz's Security Office raising issues around data security. The IBM team quickly rose to the challenge and brought together experts from multiple IBM departments to deliver a solution that earned the client's confidence in IBM as its strategic cloud provider.

## 📈 Benefits

In August 2016, Hertz signed a USD \$20 million software agreement with IBM that included USD \$4.5 million of Cloud Bluemix Dedicated subscription, Bluemix Garage services and premium support. With assistance from an expert team of IBM developers and consultants, **Bluemix Garage helps the company quickly migrate its on-premises WAS environment to a WebSphere-as-a-Service solution on the Bluemix platform.** The team uses a unique set of best practices called Bluemix Garage Method, which is based on IBM Design Thinking, DevOps principles, Cloud, lean and agile methodologies.

Hertz anticipates the following key benefits with this IBM solution:

- A highly secure and flexible solution to grow online sales through a USD \$2 billion e-commerce application
- Increased customer loyalty through new and improved Hertz.com rewrite
- Reduced cost of managing and upgrading an on-premises WAS implementation
- Faster time-to-market with a more efficient microservices-based application architecture
- Integration flexibility with third-party as well as home grown applications utilizing benefits of API Economy.

Thank You!

# Backup

# IBM WebSphere Application Server for Bluemix

Deliver Stateful applications with Speed and Simplicity of the Cloud!

## Develop, Test and Run

IBM WebSphere Application Server for Bluemix

Transactional Integrity

### Robust, Proven & Consistent Java Runtime

Develop and deploy Stateful and Transactional applications with identical interfaces & experience for Developers and Operations in the cloud and on-premises

Cloud Enabled

### Deploy WAS applications in the Cloud seamlessly

Bring your Traditional WAS & Liberty applications to pre-optimized off-premises managed cloud environment without change.

Do More with Less

### Reduce capital expenditures and operational expenses

Leverage Pay-as-You-GO or Subscription to WAS workloads in repeatable and reliable deployments in the Cloud. You can achieve savings by optimizing labor efficiency with hosted hardware consolidation & utilization.

Faster

### Accelerate WAS Application Delivery in the Cloud

Compared to "Roll your Own", Deploy apps into test and/or production in minutes, not months. Increase ability to quickly deliver results to capitalize on business opportunities.

# IBM WebSphere Application Server for Bluemix provides Simple Plan Options

## Develop, Test and Run

IBM Application Server on Cloud

<p><b>Liberty Core Plan</b> Pre-configured Instances based on Liberty Core</p>	<p><b>\$0.21/Hr or \$153/Mo*</b></p>
<p><b>WAS Base Plan</b> Pre-configured Instances based on WebSphere Application Server Full Profile.</p>	<p><b>\$0.30/Hr or \$218/Mo*</b></p>
<p><b>WAS ND Plan</b> Pre-configured Instances based on WebSphere Application Server Network Deployment</p>	<p><b>\$0.70/Hr or \$511/Mo*</b></p>
<p><b>(Optional) Bluemix Standard Support</b> Ticketing system with 24-hour responsiveness. Connect with IBM technical staff. Covers IBM Bluemix offerings and features.</p>	<p><b>10% of account charges, with a minimum monthly charge of \$200.00 USD</b></p>

One Instance of a plan below equates to **1vCPU with 2GB RAM, and 12Gig HD** capacity priced by **Instance-Hr**

Online Forum Support included in All Plans  
Approximate monthly Price based on 720 Instance Hours per month.

# WAS for Bluemix – Single Tenant (Ordering & Billing)

WebSphere  
Application Server

IBM

PUBLISH DATE  
05/16/2016

TYPE  
Service

[VIEW DOCS](#)

This service gives you the WebSphere Application Server experience in Bluemix. Choose from Liberty, Classic, or ND installations of WebSphere Application Server, preconfigured and hosted on your own Red Hat Enterprise Linux guest.

- **WebSphere Experience**

Reuse your WebSphere administration skills and scripts to ease your transition to cloud.

- **Shell and Admin UI Management**

Use a secure shell, or log into the Admin Center/Console to control your WebSphere environment.

- **Use. Abuse. Repeat.**

It's a cloud service after all. Use it for an hour. Drive it hard. Delete it. Grab a new one when you need it; it's up to you.

- **Full-Feature Application Servers**

Leverage sophisticated enterprise features like transactions, just like you do on-premise.

- **Customize just what you need**

We've already installed and configured WebSphere, now all you have to do is make those minor changes to get your application just the way you need it.

- **New Option : WAS for Bluemix Single-Tenant.**

To learn more and order, contact your Americas Call Centers, local IBM representative, or your IBM Business Partner. To identify your representative or partner call 800-426-4968. For more information, contact the Americas Call Centers. Phone: 800-IBM-CALL (426-2255) Fax: 800-2IBM-FAX (242-6329).

1. Customer Order through Sales the Total Capacity for WAS for BM – Single Tenant in a specific Datacenter
2. Access thru Bluemix Catalog view after provisioning.
3. Standard DSW Billing begins. (\*Not tied to Public Bluemix Subscription)
4. Customers deploy any combination of Liberty Core, Base, & ND VMs inside their WAS for Bluemix Single – Tenant up to order capacity.

# WAS Single Tenant Option in Public Bluemix

Traditional  
WebSphere

## Robust , Proven & Consistent Java Runtime

WebSphere Application Server provides the optimal infrastructure for a wide spectrum of emerging workloads.

Cloud Enabled

## Deploy WAS applications in the Cloud seamless

Bring Traditional WAS & Liberty on-premises application to pre-optimized off-premise hosting environment without change.

Dedicated  
Environment

## Visibility, control and security

Built with dedicated SoftLayer hardware to isolate compute, network & storage to keep applications secure. Align with corporate policies for single-tenancy and Industry Regulations.

Lower Cost &  
Risk

## Automate and Simplify to minimize errors with Full Lifecycle Mgmt

Leverage Urban Code Deploy and CLI scripting for faster, repeatable and reliable automated deployments. Clients can achieve savings labor cost and hosted hardware consolidation

Ultra-Fast  
Datacenter Link

## Unparalleled Network Performance To and From your Servers

[Optional] Simplify, secure, and speed up data transfer between your private infrastructure and Softlayer or create a new hybrid solution that leverages the best of your in-house resources. Wide geography options of deployment

# Choice of isolated services now includes WAS for Bluemix!

Enterprise ready private services – **Where** and **When** you want them

Create a true hybrid experience with **access** to over **140+ services** in Bluemix Public

## Bluemix Dedicated

*Included*

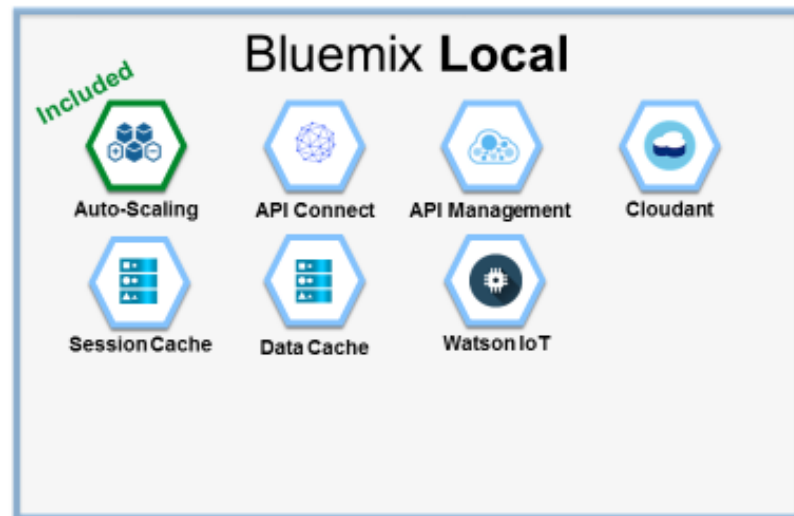

The Bluemix Dedicated services grid consists of 12 hexagonal icons arranged in three rows and four columns. The top-left icon is highlighted with a green border and labeled 'Included'. The services are: Auto-Scaling, API Connect, API Management, Cloudant, dashDB, Session Cache, Message Hub, Push Notifications, Secure Gateway, Watson IoT, and WebSphere Application Server. A red 'NEW' banner is positioned to the right of the WebSphere Application Server icon.

			<b>NEW</b>

## Bluemix Local

*Included*

The Bluemix Local services grid consists of 7 hexagonal icons arranged in two rows. The top-left icon is highlighted with a green border and labeled 'Included'. The services are: Auto-Scaling, API Connect, API Management, Cloudant, Session Cache, Data Cache, and Watson IoT.

## Bluemix Public

A horizontal row of 14 hexagonal icons representing various Bluemix Public services, including icons for API Connect, Watson IoT, Cloudant, and others.

# Why WAS for Bluemix Dedicated?

**Eddy**

Line of Business

The fastest path to your own cloud

Feels like home

Apps and data where you need them

Dedicated to you

For **security, privacy, or performance** reasons, many enterprises need their own cloud environment. With Bluemix Dedicated you can have your own total cloud, with physically isolated hardware for everything, with **Traditional WAS Inside** as **WAS for Bluemix Dedicated**.

**WAS for Bluemix Dedicated** is designed to feel like another set of nodes on your network. Using either **VPN or Direct Link** technology, your Bluemix environment is securely connected to your enterprise.

Bluemix Dedicated Platform is available in **over 25 IBM Cloud data centers** around the world. That means you can keep your data in country and put **WAS for Bluemix Dedicated** and additional Bluemix services where they best serve your users.

Bluemix Dedicated provides physically isolated hardware in an IBM data center. **As an isolated and provisioned solution, this Bluemix environment is created just for you.** With the syndicated catalog, you can power your apps and services with a combination of **WAS for Bluemix Dedicated**, **dedicated runtimes, dedicated containers and services, as well as services from the public Bluemix catalog.**
